

HR ANALYTICS DASHBOARD

Tableau Dashboard Project Report

1. Executive Summary

This project presents an interactive HR Analytics Dashboard developed in Tableau. The dashboard is designed to analyze employee workforce composition, employee attrition, active employees, age distribution, department-wise attrition, education-field attrition, gender-based attrition, and job satisfaction. It provides a consolidated view of key HR indicators to support workforce monitoring and data-driven decision making.

2. Dashboard Objectives

- Monitor the total employee workforce and active employee population.
- Measure employee attrition using attrition count and attrition rate.
- Analyze attrition across departments, gender, age groups, and education fields.
- Understand the relationship between job roles and job satisfaction ratings.
- Identify workforce patterns that may require further HR investigation.

3. Key Performance Indicators

KPI	Value	Interpretation
Employee Count	1,470	Total employees represented in the dashboard
Attrition Count	237	Employees recorded as attrited
Attrition Rate	16.12%	Share of employees represented as attrited
Active Employees	1,233	Employees remaining active
Average Age	37	Average employee age

4. Dashboard Analysis

Department-wise Attritions

The dashboard shows attrition distributed across HR, R&D, and Sales. The displayed counts are 92, 12, and 133 respectively. Sales therefore represents the largest displayed share of attrition at approximately 56.12%, followed by HR at 38.82% and R&D at 5.06%.

Employees by Age Group

The age distribution is displayed as a histogram. The dashboard shows employee counts across multiple age bands, allowing HR teams to identify concentration of employees in different age ranges and compare workforce composition.

Attrition by Gender

The dashboard displays attrition counts of 87 for Female employees and 150 for Male employees. This provides a straightforward comparison of attrition by gender and can be used as a starting point for deeper retention analysis.

Job Satisfaction Rating

The job satisfaction matrix compares job roles against satisfaction ratings from 1 to 4. The dashboard also provides a grand total, making it possible to identify job-role groups with comparatively higher or lower satisfaction levels.

Education Field-wise Attrition

The horizontal bar chart compares attrition across education fields. Life Sciences has the highest displayed count at 89, followed by Medical at 63, Marketing at 35, Technical Degree at 32, and Other at 11.

Attrition Rate by Gender and Age Group

The donut charts segment attrition by gender within age groups: Under 25, 25–34, 35–44, 45–54, and Over 55. This view helps identify how attrition is distributed across both demographic dimensions.

6. Tools and Technologies

- Tableau Public / Tableau Desktop
- Data visualization and dashboard design
- Interactive filters and calculated fields
- HR analytics and exploratory analysis

7. Business Insights

- The dashboard covers a workforce of 1,470 employees, with 1,233 shown as active.
- The overall displayed attrition rate is 16.12%, indicating that employee retention is an important area for monitoring.
- Sales has the largest displayed department-wise attrition, suggesting that retention within this department deserves closer examination.
- Male attrition is higher than female attrition in the displayed gender comparison.
- Life Sciences and Medical are the two largest displayed education-field categories by attrition.
- Job satisfaction varies by job role and rating, providing an opportunity to investigate whether satisfaction is associated with retention.

8. Recommendations

- Investigate the reasons behind higher attrition in Sales and identify role-specific retention actions.
- Analyze attrition together with tenure, compensation, overtime, and performance to identify root causes.

- Review employee satisfaction by job role and prioritize groups with lower satisfaction.
- Compare attrition rates across age and gender groups while considering workforce size for fair comparisons.
- Create regular HR dashboard refreshes to monitor changes in attrition and active employee counts.

9. Conclusion

The HR Analytics Dashboard provides a compact and interactive view of workforce and attrition patterns. By combining KPI cards, demographic analysis, department analysis, education-field analysis, and job satisfaction, the dashboard demonstrates practical use of Tableau for HR and business intelligence. The analysis can be extended with additional measures such as tenure, salary, overtime, performance, and recruitment cost to support deeper workforce planning.
